

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Patent Number: 7,436,454 B2
Issued: October 14, 2008
Name of Patentee: Takao Yamaguchi, et al.
Title of Invention: METHOD AND APPARATUS FOR TRANSMITTING
ENCODED INFORMATION BASED UPON PRIORITY
DATA IN THE ENCODED INFORMATION

**REQUEST FOR CERTIFICATE OF CORRECTION OF PATENT
FOR PTO MISTAKE (37 C.F.R. § 1.322(a))**

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Attention: Certificate of Correction Branch

1. Attached is Form PTO/SB/44.
2. Correction of the Official Letters Patent is respectfully requested in view of the following text which appears correctly in the application file:

On the Cover Page, at item (54), the word "PIORITY" in the title should read
-- PRIORITY --, as indicated in the Amendment Under Section 1.312 filed July 23, 2008.

On Page 2, at FOREIGN PATENT DOCUMENTS, insert -- JP 04-003684 1/1992 -- and
-- JP 08-149420 06/1996 --, as indicated in the Supplemental Information Disclosure
Statement filed November 1, 2007.

On Page 2, at OTHER PUBLICATIONS, "Decision of Rejection for Japanese Application No.
10-065582" should read -- Decision of Rejection for Japanese Application No. 10-065581
--, as indicated in the Correction to Information Disclosure Statement filed September
10, 2003.

On Page 2, at OTHER PUBLICATIONS, insert -- Tatsuo Nakajima, "Continuous Media
Objects with Media Scaling," Proceeding of the Internal Conference, 1998 --, as indicated
in the Supplemental Information Disclosure Statement filed November 1, 2007.

At Column 48, claim 12, "claim 11" should read -- claim 9 --, as indicated in the
Preliminary Amendment filed June 20, 2008.

3. Please send the Certificate to:

AMENDMENT UNDER SECTION 1.312

Mail Stop Issue Fee
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Responsive to the Notice of Allowance dated July 15, 2008, please amend the above-identified application as follows:

- ☒ **Amendments to the Specification** begin on page **2** of this paper.
- ☐ **Amendments to the Claims** are reflected in the listing of claims which begins on page of this paper.
- ☐ **Amendments to the Drawings** begin on page of this paper and include an attached replacement sheet(s).
- ☐ **Amendments to the Abstract** are on page of this paper. A clean version of the Abstract is on page of this paper.
- ☒ **Remarks/Arguments** begin on page **3** of this paper.

Application No.: 10/626,075
Amendment Dated July 23, 2008
Reply to Notice of Allowance Dated July 15, 2008

MDA-2880US3

Amendments to the Specification:

Please replace the title with the following, which was amended by the Amendment filed on May 15, 2007:

METHOD AND APPARATUS FOR TRANSMITTING ENCODED INFORMATION BASED UPON
PRIORITY DATA IN THE ENCODED INFORMATION

COPY

Remarks/Arguments:

The Notice of Allowance dated July 15, 2008 contains a typographical error in the title. "PIORITY" should read -- PRIORITY - as indicated in the Amendment filed on May 15, 2007, namely:

METHOD AND APPARATUS FOR TRANSMITTING ENCODED INFORMATION BASED UPON
PRIORITY DATA IN THE ENCODED INFORMATION

COPY

Respectfully submitted,

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Pursuant to 37 C.F.R. §§ 1.97 and 1.98 and to the duty of disclosure set forth in 37 C.F.R. § 1.56, the Examiner in charge of the above-identified application is requested to consider and make of record the references listed on the PTO/SB/08a and PTO/SB/08b submitted herewith. A copy of each reference listed on the PTO/SB/08a and PTO/SB/08b, other than U.S. patents, is enclosed.

Although the information submitted herewith may be "material" to the Examiner's consideration of the subject application, this submission is not intended to constitute an admission that such information is "prior art" as to the claimed invention.

In accordance with 37 C.F.R. § 1.97(g), the filing of this Information Disclosure Statement shall not be construed to mean that a search has been made.

The following Japanese references are not in the English language:

- 1) 04-003684
- 2) 08-149420

References 1) and 2) are not in the English language but an English abstract thereof is attached to the copy of the references submitted herewith.

References 1) and 2) were cited by a foreign patent office in a counterpart foreign application. MPEP Section 609(a)iii, second paragraph.

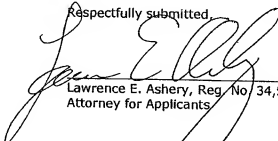

COPY

More than three months have elapsed since the filing of the above-referenced application and/or a first (non-Final) Official Action has been received. No Final Action or Notice of Allowance has yet been received and it is presumed that none has yet been mailed. Accordingly, as more specifically indicated below, a statement as required by 37 C.F.R. § 1.97(c) is provided herewith.

STATEMENT

The undersigned hereby states that each item of information disclosed in the Information Disclosure Statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the Information Disclosure Statement.

Respectfully submitted,

Lawrence E. Ashery, Reg. No. 34,515
Attorney for Applicants

PRELIMINARY AMENDMENT

Mail Stop RCE
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Responsive to the Final Office Action dated March 20, 2008, please amend the above-identified application as follows:

- ☐ **Amendments to the Specification** begin on page _____ of this paper.
- ☒ **Amendments to the Claims** are reflected in the listing of claims which begins on page **2** of this paper.
- ☐ **Amendments to the Drawings** begin on page _____ of this paper and include an attached replacement sheet(s).
- ☐ **Amendments to the Abstract** are on page _____ of this paper. A clean version of the Abstract is on page _____ of this paper.
- ☐ **Remarks/Arguments** begin on page **8** of this paper.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

✓ 1. - 22. (Cancelled)

✓ 23. (Currently Amended) A data processing apparatus configured for:

determining a priority threshold to achieve a desired transmission rate of for a stream of video or audio data comprising a header, a priority offset, and a plurality of portions of encoded information, the header including stream priority information comprising a stream priority and each portion of the encoded information including priority information comprising a priority for the each portion of the encoded information;

transmitting portions of the encoded information when a combination of the stream priority, the priority offset, and the priority of the transmitted portions of the encoded information satisfies the priority threshold and not transmitting other portions of the encoded information when a combination of the stream priority, the priority offset, and the priority of the other portions of the encoded information does not satisfy the priority threshold to thin the transmitted encoded information; and

when (1) an actual transfer rate of the transmitted portions of the encoded information exceeds a target transfer rate or (2) a decision is made that a writing of the portions of the encoded information into a transmitting buffer is delayed, the decision being based on a result of comparing an elapsed time after start of transmission with a time added to the encoded information, the added time indicating when the portions of the encoded information are to be decoded or output, adjusting the priority threshold to reduce a size of a further portion of the encoded information to be transmitted, thereby further thinning the encoded information that is transmitted.

✓ 24. - 58. (Cancelled)

5 / 59. (Currently Amended) A data processing method comprising the steps of:

COPY

successively inputting priority offsets, classified time-series data, and encoded priority information for the time-series data, the encoded priority information comprising a priority for each inputted time-series data;

determining a threshold priority for retransmitting a requested portion of the time-series data;

transmitting the priority offsets, the classified time-series data, and the encoded priority information as a stream that includes a header comprising stream priority information comprising a stream priority;

receiving the stream;

when information in the stream is damaged or lost, requesting retransmission of time-series data corresponding to the damaged or lost information;

retransmitting the requested time-series data when a combination of the stream priority, one or more of the priority offsets, and the priority of the requested time-series data corresponding to the damaged or lost information satisfies the threshold priority and not retransmitting the requested time-series data when a combination of the stream priority, one or more of the priority offsets, and the priority of the requested time-series data corresponding to the damaged or lost information does not satisfy the threshold priority; and

when the transmitted time-series data is damaged or lost at a frequency exceeding a threshold value, adjusting the threshold priority to reduce an amount of the requested time-series data retransmitted.

60. (Currently Amended) A data processing apparatus configured for:

receiving a stream of successive priority offsets, encoded time-series data, and encoded priority information comprising a priority for each received time-series data, the stream including a header comprising stream priority information comprising a stream priority;

determining a threshold priority for requesting retransmission of a portion of the received time-series data;

COPY

when information in the stream is damaged or lost, requesting retransmission of time-series data corresponding to the damaged or lost information if a combination of the stream priority, one or more of the priority offsets, and the priority of the requested time-series data corresponding to the damaged or lost information satisfies the threshold priority but not if a combination of the stream priority, one or more of the priority offsets, and the priority of the requested time-series data corresponding to the damaged or lost information does not satisfy the threshold priority; and

when information in the classified time-series data is damaged or lost at a frequency exceeding a threshold value, adjusting the threshold priority to reduce a frequency of retransmission requests issued.

9. ✓ 61. (Currently Amended) A data processing method comprising the steps of:

successively inputting priority offsets, classified time-series data, and encoded priority information for the time-series data, the encoded priority information comprising a priority for each inputted time-series data;

determining a threshold priority for transmitting the time-series data to achieve a desired transmission rate;

transmitting, as a stream that includes a header comprising stream priority information comprising a stream priority, each of the priority offsets and the classified time-series data that comprises a priority that, in combination with the stream priority and one or more of the priority offsets, satisfies the threshold priority and not transmitting classified time-series data comprising a priority that, in combination with the stream priority and one or more of the priority offsets, does not satisfy the threshold priority; and

when an actual transmission rate exceeds the desired transmission rate, adjusting the threshold priority to thin out the transmitted stream.

9. ✓ 62. (Currently Amended) A data processing apparatus configured for:

receiving a stream of successive priority offsets, encoded time-series data, and encoded priority information comprising a priority for each received time series data;

determining a priority threshold to achieve a desired transmission rate;

COPY

transmitting, as a stream that includes a header comprising stream priority information comprising a stream priority, each of the priority offsets and the encoded time-series data that comprises a priority that, in combination with the stream priority and one or more of the priority offsets, satisfies the priority threshold and not transmitting encoded time-series data comprising a priority that, in combination with the stream priority and one or more of the priority offsets, does not satisfy the priority threshold; and

adjusting the priority threshold to thin out the transmitted stream to achieve the desired transmission rate when the desired transmission rate has not been achieved.

✓ 63. - 94. (Cancelled)

635. (Currently Amended) A data processing method comprising:

determining a priority threshold to achieve a desired transmission rate for a stream of video or audio data comprising a header, a priority offset, and a plurality of portions of encoded information, the header including stream priority information comprising a stream priority and each portion of the encoded information including priority information comprising a priority for the each portion of the encoded information;

transmitting portions of the encoded information when a combination of the stream priority, the priority offset, and the priority of the transmitted portions of the encoded information satisfies the priority threshold and not transmitting other portions of the encoded information when a combination of the stream priority, the priority offset, and the priority of the other portions of the encoded information does not satisfy the priority threshold;

when (1) an actual transfer rate of the transmitted portions of the encoded information exceeds a target transfer rate or (2) a decision is made that a writing of the portions of encoded information into a transmitting buffer is delayed, the decision being based on a result of comparing an elapsed time after start of transmission with a time added to the encoded information, the added time indicating when the portions of the encoded information is to be decoded or output, adjusting the priority threshold to reduce a size of a further portion of the encoded information to be transmitted, thereby further thinning the encoded information that is transmitted.

COPY

✓ 96. (Previously Presented) The data processing apparatus of claim 23, wherein when a transmission rate exceeds a threshold value, an increased priority is given to the encoded information that should be transmitted in order to decrease the transmission rate.

✓ 97. (Previously Presented) The data processing method of claim 59, wherein when a loss rate of encoded information or a retransmission frequency exceeds a threshold value, an increased priority is given to the encoded information that should be retransmitted in order to decrease the loss rate or the retransmission frequency.

✓ 98. (Previously Presented) The data processing method of claim 61, wherein when a transmission rate exceeds a threshold value, an increased priority is given to the encoded information that should be transmitted in order to decrease the transmission rate.

✓ 99. (Previously Presented) The data processing apparatus of claim 23, wherein the encoded information is for I frame, P frame or B frame video data, and

the priority threshold is raised or lowered according to the priority information added to the encoded information.

✓ 100. (Previously Presented) The data processing apparatus of claim 23, wherein at least one of the stream priority and the priority for the each portion of the encoded information is raised when at least one of a retransmission frequency and a loss rate of information exceeds a predetermined threshold.

✓ 101. (Previously Presented) The data processing method of claim 59 further comprising raising at least one of the stream priority and the priority for the each inputted time-series data when at least one of a retransmission frequency and a loss rate of information exceeds a predetermined threshold.

✓ 102. (Previously Presented) The data processing apparatus of claim 60, wherein at least one of the stream priority and the priority for the each received time-series data is raised when at least one of a retransmission frequency and a loss rate of information exceeds a predetermined threshold.

✓ 103. (Previously Presented) The data processing method of claim 61 further comprising raising at least one of the stream priority and the priority for the each inputted

COPY

time-series data when at least one of a retransmission frequency and a loss rate of information exceeds a predetermined threshold.

1A ✓ 104. (Previously Presented) The data processing apparatus of claim 62, wherein at least one of the stream priority and the priority for the each received time-series data is raised when at least one of a retransmission frequency and a loss rate of information exceeds a predetermined threshold.

1B ✓ 105. (Previously Presented) The data processing method of claim 95 further comprising raising at least one of the stream priority and the priority for the each portion of the encoded information when at least one of a retransmission frequency and a loss rate of information exceeds a predetermined threshold.

UNITED STATES PATENT AND TRADEMARK OFFICE
CERTIFICATE OF CORRECTION

PATENT NO.: 7,436,454 B2
APPLICATION NO.: 10/626,075
DATED: OCTOBER 14, 2008
INVENTOR(S): TAKAO YAMAGUCHI, ET AL.
